

Clinical Policy: C1 Esterase Inhibitors (Berinert, Cinryze, Ruconest)

Reference Number: CP.PHAR.202

Effective Date: 03/16

Last Review Date: 03/17

[Coding Implications](#)
[Revision Log](#)

See [Important Reminder](#) at the end of this policy for important regulatory and legal information.

Description

The intent of the criteria is to ensure that patients follow selection elements established by Centene[®] clinical policy for C1 esterase inhibitor (human – Berinert[®], Cinryze[®]; recombinant – Ruconest[®]).

Policy/Criteria

It is the policy of health plans affiliated with Centene Corporation[®] that Berinert, Cinryze, and Ruconest are **medically necessary** when one of the following criteria are met:

I. Initial Approval Criteria

A. Hereditary Angioedema (HAE) (must meet all):

1. Diagnosis of HAE confirmed by one of the following (a or b):
 - a. Low C4 level and low C1-INH antigenic or functional level (see Appendix B);
 - b. Normal C4 level and normal C1-INH levels, and all of the following (i - iii):
 - i. History of recurrent angioedema;
 - ii. Family history of angioedema;
 - iii. Other types of angioedema have been ruled out (e.g., ACE-I/ARB-associated or other drug-induced angioedema, allergic angioedema, nonhistaminergic angioedema);
2. Member meets one of the following (a, b, or c):
 - a. Berinert: prescribed to treat acute abdominal, facial, or laryngeal attacks;
 - b. Ruconest: prescribed to treat acute attacks, not including laryngeal attacks;
 - c. Cinryze: prescribed to for routine prophylaxis against angioedema attacks of HAE;
3. Prescribed dose does not exceed:
 - a. Berinert: 20 IU/kg per single dose, up to 2 doses administered in a 24 hour period;
 - b. Ruconest: 4200 IU per single dose, up to 2 doses administered in a 24 hour period;
 - c. Cinryze: 1000 units (2 vials) every 3-4 days.

Approval duration:

Berinert or Ruconest – 12 months (no more than 4 doses per month)

Cinryze – 6 months

B. Other diagnoses/indications: Refer to CP.PHAR.57 - Global Biopharm Policy.

II. Continued Approval

A. Hereditary Angioedema (must meet all):

1. Currently receiving medication via Centene benefit or member has previously met all initial approval criteria;
2. Documentation of positive response to therapy (if Cinryze is requested, member has demonstrated reduction in attacks from baseline, or request is for a dose increase);
3. Prescribed dose does not exceed:
 - a. Berinert: 20 IU/kg per single dose, up to 2 doses administered in a 24 hour period;
 - b. Ruconest: 4200 IU per single dose, up to 2 doses administered in a 24 hour period;
 - c. Cinryze: 2500 units (5 vials) every 3-4 days.

Approval duration:

Berinert or Ruconest – 12 months (no more than 4 doses per month)

Cinryze – 12 months

B. Other diagnoses/indications (must meet 1 or 2):

1. Currently receiving medication via Centene benefit and documentation supports positive response to therapy; or
2. Refer to CP.PHAR.57 - Global Biopharm Policy.

Background

Description/Mechanism of Action:

Berinert is a human plasma-derived, purified, pasteurized, lyophilized concentrate of C1 esterase inhibitor. Berinert is prepared from large pools of human plasma from US donors.

Ruconest is a recombinant analogue of human complement C1 esterase inhibitor. Ruconest is purified from the milk of transgenic rabbits.

Cinryze is a sterile, stable, lyophilized preparation of C1 esterase inhibitor derived from human plasma.

Increased vascular permeability and the clinical manifestation of HAE attacks may be primarily mediated through contact system activation. Suppression of contact system activation by C1 esterase inhibitor through the inactivation of plasma kallikrein and factor XIIa is thought to modulate this vascular permeability by preventing the generation of bradykinin.

Formulations:

Berinert is supplied as single-use vials containing 500 IU of lyophilized concentrate for reconstitution.

Ruconest is supplied as single-use vials containing 2100 IU of lyophilized powder for reconstitution.

Cinryze is supplied as single-use vials containing 500 units of lyophilized powder for reconstitution.

FDA Approved Indications:

Berinert is a C1 esterase inhibitor (human)/intravenous product indicated for:

CLINICAL POLICY
C1 Esterase Inhibitors

- Treatment of acute abdominal, facial, or laryngeal attacks of HAE in adult and adolescent patients.

Limitations of use: The safety and efficacy of Berinert for prophylactic therapy have not been established.

Ruconest is a C1 esterase inhibitor (recombinant)/intravenous product indicated for:

- Treatment of acute attacks in adult and adolescent patients with HAE.

Limitations of use: Effectiveness was not established in HAE patients with laryngeal attacks.

Cinryze is a C1 esterase inhibitor (human)/intravenous product indicated for:

- Routine prophylaxis against angioedema attacks in adolescent and adult patients with HAE.

Appendices

Appendix A: Abbreviation Key

ACE-I: angiotensin-converting enzyme inhibitor

ARB: angiotensin receptor blocker

CI-INH: C1 esterase inhibitor

HAE: hereditary angioedema

IU: international units

Appendix B: Diagnosis of HAE

There are two classifications of HAE: HAE with C1-INH deficiency (further broken down into Type I and Type II) and HAE of unknown origin (also known as Type III).

In both Type I (~85% of cases) and Type II (~15% of cases), C4 levels are low. C1-INH antigenic levels are low in Type I while C1-INH functional levels are low in Type II. Diagnosis of Type I and II can be confirmed with laboratory tests. Reference ranges for C4 and C1-INH levels can vary across laboratories (see below for examples); low values confirming diagnosis are those which are below the lower end of normal.

<i>Laboratory</i>	<i>Mayo Clinic</i>	<i>Quest Diagnostics</i>	<i>LabCorp</i>
Test & Reference Range			
C4	14-40 mg/dL	16-47 mg/dL	9-36 mg/dL
C1-INH, antigenic	19-37 mg/dL	21-39 mg/dL	21-39 mg/dL
C1-INH, functional	Normal: > 67% Equivocal: 41-67% Abnormal: < 41%	Normal: ≥ 68% Equivocal: 41-67% Abnormal: ≤ 40%	Normal: > 67% Equivocal: 41-67% Abnormal: < 41%

Type III, on the other hand, presents with normal C4 and C1-INH levels. Some patients have an associated mutation in the FXII gene, while others have no identified genetic indicators. Type III is very rare (number of cases unknown), and there are no laboratory tests to confirm the diagnosis. Instead, the diagnosis is clinical and supported by recurrent episodes of angioedema with a strong family history of angioedema.

Coding Implications

Codes referenced in this clinical policy are for informational purposes only. Inclusion or exclusion of any codes does not guarantee coverage. Providers should reference the most up-to-date sources of professional coding guidance prior to the submission of claims for reimbursement of covered services.

HCPCS Codes	Description
J0596	Injection, C-1 esterase inhibitor (recombinant), Ruconest, 10 units
J0597	Injection, C-1 esterase inhibitor (human), Berinert, 10 units
J0598	Injection, C-1 esterase inhibitor (human), Cinryze, 10 units

Reviews, Revisions, and Approvals	Date	Approval Date
Policy converted to new template and split from CP.PHAR.46.HAE Treatment. Criteria: added dosing/max dose criteria per PIs; increased approval from one dose to up to two doses in 24 hours for Berinert.	02/16	03/16
Age changed from ≥ 13 to ≥ 12 , per the FDA definition of adolescent.	05/16	
Added criteria to confirm diagnosis. Removed age requirement. Increased approval duration to 12 months for Berinert/Ruconest and incorporated recommended dosing from PI. Added criteria for continued approval. Removed warnings against hypersensitivity reactions. For Cinryze, modified initial approval duration for long-term prophylaxis to 6 months and for renewal to 12 months. For continued therapy, added max dose criteria and reasons to discontinue.	02/17	03/17

Important Reminder

This clinical policy has been developed by appropriately experienced and licensed health care professionals based on a review and consideration of currently available generally accepted standards of medical practice; peer-reviewed medical literature; government agency/program approval status; evidence-based guidelines and positions of leading national health professional organizations; views of physicians practicing in relevant clinical areas affected by this clinical policy; and other available clinical information. The Health Plan makes no representations and accepts no liability with respect to the content of any external information used or relied upon in developing this clinical policy. This clinical policy is consistent with standards of medical practice current at the time that this clinical policy was approved. “Health Plan” means a health plan that has adopted this clinical policy and that is operated or administered, in whole or in part, by Centene Management Company, LLC, or any of such health plan’s affiliates, as applicable.

The purpose of this clinical policy is to provide a guide to medical necessity, which is a component of the guidelines used to assist in making coverage decisions and administering benefits. It does not constitute a contract or guarantee regarding payment or results. Coverage decisions and the administration of benefits are subject to all terms, conditions, exclusions and limitations of the coverage documents (e.g., evidence of coverage, certificate of coverage, policy, contract of insurance, etc.), as well as to state and federal requirements and applicable Health Plan-level administrative policies and procedures.

This clinical policy is effective as of the date determined by the Health Plan. The date of posting may not be the effective date of this clinical policy. This clinical policy may be subject to applicable legal and regulatory requirements relating to provider notification. If there is a discrepancy between the effective date of this clinical policy and any applicable legal or regulatory requirement, the requirements of law and regulation shall govern. The Health Plan retains the right to change, amend or withdraw this clinical policy, and additional clinical policies may be developed and adopted as needed, at any time.

This clinical policy does not constitute medical advice, medical treatment or medical care. It is not intended to dictate to providers how to practice medicine. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical advice and treatment of members. This clinical policy is not intended to recommend treatment for members. Members should consult with their treating physician in connection with diagnosis and treatment decisions.

Providers referred to in this clinical policy are independent contractors who exercise independent judgment and over whom the Health Plan has no control or right of control. Providers are not agents or employees of the Health Plan.

CLINICAL POLICY

C1 Esterase Inhibitors

This clinical policy is the property of the Health Plan. Unauthorized copying, use, and distribution of this clinical policy or any information contained herein are strictly prohibited. Providers, members and their representatives are bound to the terms and conditions expressed herein through the terms of their contracts. Where no such contract exists, providers, members and their representatives agree to be bound by such terms and conditions by providing services to members and/or submitting claims for payment for such services.

Note: For Medicaid members, when state Medicaid coverage provisions conflict with the coverage provisions in this clinical policy, state Medicaid coverage provisions take precedence. Please refer to the state Medicaid manual for any coverage provisions pertaining to this clinical policy.

Note: For Medicare members, to ensure consistency with the Medicare National Coverage Determinations (NCD) and Local Coverage Determinations (LCD), all applicable NCDs, LCDs, and Medicare Coverage Articles should be reviewed prior to applying the criteria set forth in this clinical policy. Refer to the CMS website at <http://www.cms.gov> for additional information.
